Catalyst™ Report Manager

Catalyst™ Report Manager is tool for corporate IT users for creating reports specifications in few wizard style steps and subsequent deployment in web servers like Tomcat. The corporate management users access these reports from anywhere using normal browser. Unlike other reporting tools, it does not require any reporting server licenses.

Catalyst™ Report Manager is best suited for companies having various legacy databases and who wish to provide web-based access of various reports to the executives of the company who are on the field.

What is Catalyst™ RM?

- A that offers a complete solution for report management
- An application that serves diverse informational requirements of various users.
- A tool that is designed to streamline the process of accessing raw data from any data source, applying complex business logic and formatting the results to create high-value content for users

Catalyst™ Report Manager extracts intelligent, actionable business information from raw data. It enables the users of the company to generate a variety of web-based reports in a very short span of time.

Monitoring business processes and ensuring a smooth operation is the key for successful business execution. Catalyst™ Report Manager is a tool that helps the users to perform this crucial task. It provides them organized on-line access to accurate and timely information as and when they need it.

Outstanding Features

- Ten step wizard to create report specifications in industry standard XML format. Context specific help at each wizard step.
- Supports 'Display Property Specification' up to the cell level.
- Allows 'Global Level Report Settings' at a single location to avoid specifying the same for each report.
- Different gateways of requirement specifications are available depending on technical level of users.
 - For non-technical users, build SQL query with the help of GUI.
 - For Users Proficient in query writing & XML can write XML and generate reports.
- Runtime parameters can be specified and accepted before executing the report.
- Multiple Pages navigation support in generated code.
- Auto-deployment of the generated code in TOMCAT server and execution of the same code using in-built browser of the tool.
- Each report code is generated as 'Platform Independent' code, which may be deployed on any J2EE compliant application server.
- Well structured JSP Code generation
- JSP Code generated produces simple, lightweight HTML as an output with optimum support to RGB Model.
- JSP Code generated is independent unit of code without any propriety or third party library calls. So it is easy to deploy any J2EE compliant application server.
- Flexibility to modify generated JSP Code as per changing needs of same report.
- Supports Multi-Tier Structure for ultimate security.
- Supports multiple databases like SQL Server 7.0/ 2000, Oracle and MS-

Access.

System Requirements

Server Configuration:

Processor PIII 500 MHz (minimum)
600MB of free hard disk space (minimum)
512 MB RAM recommended
Resolution 800 X 600
Microsoft Small Business Server
Internet Connectivity Recommended (Some features depend on this facility)
OS: Linux or Win 2000
Legacy Database: SQL 2000/ Oracle/ DB2

Work Station Configuration:

Processor PIII 333 MHz (minimum)
256 MB RAM recommended
20GB Hard disk Drive
Resolution 800 X 600
Standard mouse and keyboard
Windows 95, 98, ME, NT4, 2000, or XP
Internet Explorer version 5 or above
Microsoft windows network, access to BM server
Internet Connectivity Recommended (Some features depend on this facility)
